

Aerosol Lubricants

- 802 Open Gear Lube
- 803 Chain & Cable Lubricant
- 808 Penetrating Oil
- 812 Moly Dry Lube
- 815 Food Machinery Grease

SWEPACO 802 Open Gear Lube

Makes open gear lubricating a clean job -- Lubricating open gears is often an unpleasant, messy job involving a bucket of sticky grease, a paddle and sometimes even heat to thin the lubricant. No more with SWEPACO 802 Open Gear Lube. Forget about the application tools, the heat, the mess to clean up, the danger of slippery and greasy floors and machines. Now, just press the button of the convenient aerosol can and without mess or fuss you have quick, clean, sure lubrication.

Tough film reduces wear -- SWEPACO 802 contains a special extreme pressure additive that passed the 4-gram Timken Load Test (43-lb. lever arm for 30 minutes). SWEPACO 802 puts a tough film on gears that resists heavy loads, reduces metal-to-metal contact, helps prolong gear life and helps reduce noise.

Stays put -- Unlike heavier grease that will fling off from its own weight, SWEPACO 802 won't fling or drip off. And with the SWEPACO spray method, you can reach right down in between the gear teeth and touch up bare spots without relubricating the whole machine.

SWEPACO's line of aerosol spray lubricants combines the superior performance of SWEPACO Lubrication with the convenience of push-button spray application.

This all helps to eliminate waste and mess.

All-purpose, all-temperature --

The use of 802 is profitable for any open gear application such as shovels, draglines, gears, asphalt rollers, winches, cables, cams and drill rigs. It's an all-temperature lubricant which resists extreme cold, but also has a high melting point of over 200°F. This wide temperature range puts an end to dry gear starts.

SWEPACO 803 Chain & Cable Lubricant

Helps prolong life of chains and cables -- Placing a film of lubrication on the surface of today's high-tension chains and cables simply doesn't get the job done. That's why you need SWEPACO 803 Chain & Cable Lubricant! It penetrates deep into links and strands to help to eliminate internal wear and friction, a major cause of cable and chain fatigue and failure.

Contains graphite -- SWEPCO 803 contains graphite which helps provide long lasting, superior lubrication of costly chain and cable installations.

Even film lubrication plus deep penetration = no rust & dirt -- An even film lubrication over the entire chain or cable surface helps protect against rust and friction, which helps eliminate two of the most common causes of chain and cable failure.

SWEPCO 808 Penetrating Oil

Cuts rust, paint, dirt, grease and corrosion fast -- SWEPCO 808 goes to work to loosen frozen parts, dissolve rust and provide a firm surface for tools. Special high-pressure construction means SWEPCO 808 penetrates deep and fast to get to the problem with a minimum of time.

Made of the finest raw materials -- SWEPCO 808 is superior because it is a scientific blend of the finest available oils, solvents, wetting agents and Moly. SWEPCO 808 has been formulated to conveniently meet the most demanding professional needs at no additional cost.

SWEPCO 812 Moly Dry Lube

Use where oil or grease is not desirable -- SWEPCO 812 is a specially formulated "dry" lubricant. Its carrier agent evaporates almost instantly, leaving the remaining "dry" lubrication.

Superior lubrication -- SWEPCO 812 is formulated with Moly, the best lubricant available. In addition, dirt and foreign particles cannot adhere to this lubricant; thus, better lubrication and less wear for

surfaces exposed to such contaminants. It can be used at higher temperatures than conventional greases. And SWEPCO 812 outlasts ordinary lubricants.

Won't drip or run off -- SWEPCO 812 dry film means no waste or drippage. Saves money and time.

All-purpose -- SWEPCO 812 is recommended anywhere conventional grease or oil is not desirable. For chains and sprockets, sliding surfaces, rollers and conveyors, door locks and hinges, and many other applications.

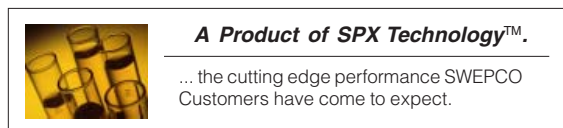

SWEPCO 815 Food Machinery Grease

H1 Rated -- SWEPCO 815 provides superior protection in applications requiring a USDA/NSF H1 or CFIA "n" rated grease where incidental food contact might occur.

Superior lubrication -- SWEPCO 815 is formulated for excellent pumpability, high temperature performance, acid & corrosion resistance and resistance to water wash out. And superior lubricity reduces energy consumption in heavily loaded processing lines.

Convenient -- SWEPCO 815 is great for quick touch-ups and difficult lube points.

SWEPCO AEROSOL LUBRICANTS ARE CONVENIENT TO STORE AND USE AND SAVE TIME AND MONEY
